

QUICK TIPS : iOS

HOW TO DECODE URL QUERY ITEMS?

Rohit Saini
iOS Developer

QUICK TIPS : iOS

```
extension String{  
    func getQueryStringValueFrom(param: String) → String? {  
        guard let url = URLComponents(string: self) else { return nil }  
        var components = URLComponents()  
        components.query = url.fragment  
        return components.queryItems?.first(where: { $0.name == param })?.value  
    }  
}
```

//Example URL string

```
let urlString = "https://mapr.tax.gov.me/ic/#/verify?  
iic=AC1A9012A330E30D2A0466B9E0E85A9E&tin=02675889&crtd=2021-02-03T09:07:10%2001:00&ord  
=2882&bu=zy841nn094&cr=uh250xz007&sw=yq611ld453&prc=65.89"
```

QUICK TIPS : iOS

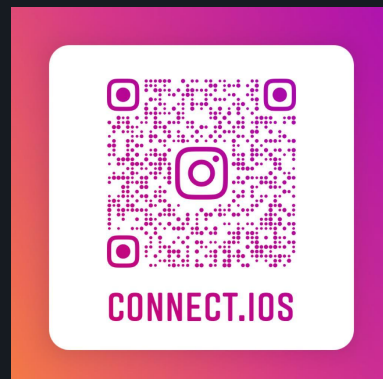

```
//If we want to get "prc" value from above url string
```

```
//How to use
```

```
if let price = urlString.getQueryStringValueFrom(param: "prc"){  
    print(price)  
}
```
